ASSOCIATE OF APPLIED SCIENCE IN CIVIL AND CONSTRUCTION ENGINEERING TECHNOLOGY

The associate degree program prepares technicians to support civil engineers in structural design, public works, construction, transportation, and environmental engineering. Graduates are hired by consulting engineers, architects, contractors, and government agencies.

Students in the Civil and Construction Engineering Technology (CCET) program may choose to complete two years of study and earn an Associate of Applied Science (AAS) degree. The AAS degree provides early access to employment in engineering support positions. Upon completion of the AAS degree, the student may continue on to the Bachelor of Science in Applied Science (BSAS) degree. This program provides additional coursework, continuing the student's growth to that of an engineer or engineering technologist. Exceptional students may be eligible for enrollment in a Master of Engineering or Master of Business Administration program.

Program Educational Objectives

Educational objectives for the civil and construction engineering technology programs have been developed by faculty and the program industrial advisory committee to support the university, college, and the School of Computer Science, Information, and Engineering Technology missions. Graduates of the CCET associate degree program are prepared to support civil engineers in:

- · structural design
- · public works
- · construction
- inspection
- transportation
- · environmental engineering

During their first few years after earning the AAS in civil and construction engineering technology degree at YSU, graduates will have demonstrated the ability to:

- Secure employment and achieve recognition in a technical career related to their civil and construction engineering technology degree.
- Continue to gain professional knowledge through lifelong learning and communicate effectively in a professional environment.
- 3. Advance in pursuit of the BSAS degree.

Accreditation

The Associate of Applied Science in Civil and Construction Engineering Technology is accredited by the Engineering Technology Accreditation Commission of ABET, https://www.abet.org, under the General Criteria and the Program Criteria for Civil Engineering Technology and Construction Engineering Technology.

Date of last campus visit: October 2017

Accredited through: 2024

Next campus visit: October 2023

Program outcomes

ASSOCIATE OF APPLIED SCIENCE in civil and construction engineering technology

Graduates of the Associate Degree in Civil and Construction Engineering Technology will possess the following competencies upon graduation:

- Learning Outcome 1: ability to use graphic techniques to produce engineering documents and use modern instruments, methods, and techniques to implement construction contracts, documents, and codes
- Learning Outcome 2: conduct standardized field/laboratory testing on civil engineering materials and evaluate materials/methods for construction projects
- Learning Outcome 3: utilize modern surveying methods for land measurement and/or construction layout
- Learning Outcome 4: determine forces and stresses in elementary structural systems
- Learning Outcome 5: estimate material quantities and costs for technical projects
- Learning Outcome 6: employ productivity software to solve technical problems
